

I'm not even in one of the markets affects by the local service provided by XM and think this is appalling. If PAYING XM customers want that information, then it should be provided to them. The archaic practices of the NAB need to be stopped. You don't deal with competition by trying to stop them, you improve your services so people don't feel the need to look elsewhere for their programming. I for one went to XM recently because i just couldn't take the monotony that is CT radio these days.
